We will use the labels  $A, \dots, J$  and  $a, \dots, j$  to write triangulations of  $C(2\Delta_3, 2\Delta_3)$  in compact format.

## 1 Documentation

### 1.1 Point configuration

We are working with the lattice points of the Cayley polytope  $C(2\Delta_3, 2\Delta_3)$ , which are given by the rows of the following matrix:

### 1.2 ID

The ID of a graph runs from 0 to 4,008 and records its place in our list.

### 1.3 Members in class

The number of “members in class” records how many unimodular triangulations of the Cayley polytope  $C(2\Delta_3, 2\Delta_3)$  give rise to a tropical elliptic curve in that given graph isomorphism class.

### 1.4 Triangulation

For every graph, we record one unimodular triangulation of  $C(2\Delta_3, 2\Delta_3)$  inducing it.
